

INTEGRACAD2009

WHAT IS INTEGRACAD?

This overview is based on the 11/2009 program version

A professional program for designers of heating, cooling, ventilation, potable water and drainage installations.

All-in-one program framework that includes building structure management, engineering calculation modules, an autonomous CAD module and print module. A comprehensive platform for designing both simple and complex building installations with the same, easy to use tools.

A user friendly interface is the cornerstone of the program. It is designed to give the user a lot of flexibility in choosing the best way to work on a project. And while you are engaged with the project, the Autosave and Autobackup functions will keep your data safe.

The many automated functions connect the calculations and drawings and speed up the design process. With read/write support for dwg files and data export to xls files you can use the power of the program and still have full compatibility with the rest of your software tools.

The program's portable USB licence key can be plugged in any computer with a pre-installed program. The licence key can be used at the office, at home or on the laptop. It can be shared by co-workers, or even partners from different companies. And when it's time to upgrade to the next program version, all is done over the Internet.

For a detailed list of features check our website at www.integracad.com or contact us directly.

Support for all users is very important to us. That is why all users have an unlimited access to our support team and our online resources. We believe user feedback is very important and we strive to improve our program according to it..

We don't want you to miss the next update. So we made sure all buyers have a full one year of program updates included with every purchase. To keep up, you will get access to the partner pages of our website where you can download the latest program version. The updates can be extended in following years and you will never have to pay the full software price again.

Any questions? We are here to help! We can make a program presentation on-line or at your office. Call or write to us, and we will do our best to find a solution that is right for you. Or you can simply use chat for a quick Q&A session.
