INTEGRACAD 2009

Presentation of the new IntegraCAD 2009

From 21. to 25. April the Interklima Fair will be held at the Zagreb fairground. All visitors can come to our stand in Hall nr. 8 to take a look at our newest software development.

We will exclusively show the first version of the upcoming new program IntegraCAD 2009. The most important new features include:

New and improved calculation

- Ventilation ducts, fan-coils, U-coefficients

New CAD module

- Compatible to dwg 2009 file format
- New underfloor heating pipe loop drawing tools
- New radiator pipeline drawing tools for automatic connection

New program core

- Re-design of the program interface
- Faster read/write operations in project files (DualCore support)
- Unicode support (cyrillic fonts, greek letters, indexes...)

Additional program packages

Adding to our current Professional and Suite program packages we now offer two additional program versions:

Professional + Ventilation duct calculation = Preimum

Suite + Ventilation duct calculation = Enterprise

New program upgrade system

From now on, all program upgrades include 12 months of software service. This includes all minor and major patches and new released program versions.
